

## Technical Data

### Product Description

VMS Modified H-Bar Systems can be provided in a variety of configurations and combinations of materials, with siding profiles either Box Rib as illustrated below or 7.2 Rib, and with insulation ranging from 2" thru 8" thick.

Weld Pins, shop-applied to the lower leg of H-Bars provide secure attachment of insulation boards, prohibiting insulation "fall-out" or sagging. As in all VMS Engineered Systems, the component parts are selected, sized, quantified, and designed to meet the specific requirements and specifications of the project.
