

Technical Data

Product Description

VMS Panel & H-Bar Combination Systems combine labor saving pre-insulated panels with the strength and versatility of H-Bar Systems. These "hybrid" systems offer all of the insulation and lagging options available in other systems, and additionally offer the ability to combine lighter-weight, lower-temperature insulations in panels installed over heavier, higher-temperature field-installed insulations.

As in all VMS Engineered Systems, the component parts are selected, sized, quantified, and designed to meet the specific requirements and specifications of the project.
